

CLEANING & MAINTENANCE

STEP 1

Remove the A+2000 from your unit - it installs and removes just like a disposable air filter

STEP 2

Simply backwash (see arrow on filter) with a garden hose - a mild degreaser can be used if desired.

STEP 3

Shake out moisture and reinstall. That's it! For optimum performance clean your A+2000 at least once a month.

STEP 4

Simply vacuum the A+2000 from the front once a month for maximum protection.
